

# IMPORTANT NOTICE

## Mounting The Head Shells

## Cartridge Compatibility

- The Shure<sup>®</sup> MCC Cartridge Carry Case is compatible with head shells and integrated cartridges featuring a standard lift arm angle, such as a standard Technics<sup>®</sup> or Vestax<sup>®</sup> head shell.
- The Shure<sup>®</sup> MCC Cartridge Carry Case is not compatible with integrated cartridges featuring an elevated lift arm such as the Ortofon<sup>®</sup> Concorde, the Stanton<sup>®</sup> Trackmaster, or the Numark<sup>®</sup> Phat Track.

## Precautions During Air Travel

- Pressure changes during air travel can create a vacuum seal of the case. If this occurs, gently pry the case open using a coin or other flat surface.
- To prevent vacuum seals from occurring, place the attached carrying cord inside the case before closing and leave the left clasp open.
